6BUIS019C Digital Strategy
Assessment Specification (2026/27)

Module Leader:	Ms Shonali Aponso <shonali.a@iit.ac.lk>
Assessment unit:	Group Coursework (Groups of 4 students)
Weighting:	50%
Qualifying mark:	30%
Description:	Develop business strategy/recommendations and a digital strategy, supported by extensive research and in-depth analysis.
Learning Outcomes Covered in this Assignment:	LO2 Undertake strategic analysis using appropriate tools or frameworks to understand business challenges and opportunities. LO3 Formulate a cohesive digital strategy or an actionable plan, using appropriate tools or frameworks. LO4 Assess the applicability and potential of a specific technological solution(s) or trend(s) in a business environment; LO6 Collaborate effectively in a team, contributing to tasks such as research, analysis, synthesis, and presentation of results, while developing teamworking and communication skills.
Handed Out:	Thursday, 24 September 2026
Due Date:	Tuesday, 17 Nov 2026 (1:00 pm)
Expected deliverable:	A single group report containing all required parts.
Method of Submission:	Online via Blackboard. The submission link will be under the "Assessment" section. Only one member submits the report on behalf of the group.
Assessment regulations:	For information regarding University Assessment Regulations, please refer to this website.
Penalty for late submission:	If you submit your coursework late but within 24 hours or one working day of the specified deadline, 10 marks will be deducted from the final mark, as a penalty for late submission, except for work which obtains a mark in the range 40 – 49%, in which case the mark will be capped at the pass mark (40%). If you submit your coursework more than 24 hours or more than one working day after the specified deadline you will be given a mark of zero for the work in question unless a claim of Mitigating Circumstances has been submitted and accepted as valid. It is recognised that on occasion, illness or a personal crisis can mean that you fail to submit a piece of work on time. In such cases you must apply for mitigating circumstances (MC) on-line, giving the reason for your late or non-submission. For detailed information regarding MC, please refer to this website.

1. Coursework Group Rules and Guidelines

This coursework is designed to give you experience working collaboratively on a real-world challenge: **Advancing Sustainability at Informatics Institute of Technology**. Working effectively in diverse teams is a valuable professional skill, and this module provides an opportunity to develop it in a supportive and inclusive environment.

You are required to work in a group of 4 students. Submissions by individuals or by groups of fewer or more students will not be accepted unless approved in advance by the module tutor or module leader.

You may choose your own group members. However, all group members must be from the same seminar slot.

Once you have formed your group, you must complete and **submit the Group Contract by 01 October 2026** via Blackboard. The Group Contract template is available in the **Assessment** section.

You are strongly encouraged to make an effort to join or form a group yourself. If you are unable to find a group, you must complete the **Group Request Form**, available on Blackboard, by **01 October 2026**. The module leader will then assign you to a group.

Group changes will not normally be allowed after **16 October 2026**. You should therefore begin working together as soon as possible and raise any concerns with the module leader before this date.

2. Coursework Challenge – Advancing Sustainability at IIT

For this coursework, you will take on the role of a **Junior Consultant** within a small Business & Technology Consultancy. Assume that your team has been commissioned to undertake a strategic project for the IIT's Sustainability Team, led by of its Sustainability Advisors. Your seminar tutor will act as your **Lead Consultant**, providing guidance and overseeing your work.

The **Informatics Institute of Technology** is committed to improving sustainability across its campuses and promoting sustainable behaviour among students and staff and has implemented a range of initiatives such as installing smart meters and recycling facilities.

The Sustainability Team is now considering the **next phase of its sustainability initiatives** and has commissioned your team to help identify where IIT should focus its attention over the coming years. Your work should identify initiatives and opportunities that will strengthen and advance the IIT's sustainability ambitions.

Your team is expected to:

- **Analyse the internal and external environment** to identify key factors relevant to IIT.
- **Identify and evaluate potential strategic opportunities**, considering alternative ways in which IIT could advance its sustainability ambitions.
- **Recommend a focused strategic programme of initiatives** that address the most significant sustainability priorities identified through your analysis.
- **Develop a supporting digital strategy** that identifies the business applications, digital capabilities and other technology components needed to enable the proposed initiatives.

The University cannot pursue every possible opportunity, so your team will need to make **informed strategic choices** about where it should focus its efforts. Your report should therefore demonstrate not only what IIT should do, but also why these priorities have been selected over other credible alternatives.

There is **no single correct set of initiatives** for this coursework. Different teams may reach different conclusions. The quality of your work will depend on the strength of your evidence, analysis, strategic reasoning, contextual understanding and justification of your choices.

Your work should consider three broad areas:

- **The client:** the Sustainability Team, its current activities and objectives, existing capabilities and the constraints within which it operates.
- **The sector and external environment:** relevant developments, practices, opportunities and challenges within the Higher Education sector and the wider sustainability context.
- **Technology:** mature and emerging technologies that could be used to support IIT's sustainability objectives.

Creative and critical thinking are encouraged. However, your recommendations must be **realistic, feasible and supported by evidence**.

3. Key Information: The Client and the Proposed Initiative

The quality of your work will depend in part on your group's understanding of IIT's current situation and the wider business environment.

IIT is a private higher education institute in Colombo offering British degree programmes in IT and Business in partnership with the University of Westminster. It has a growing student community and is preparing to relocate to a new green campus in Ratmalana, which is currently under construction.

To coincide with this move, IIT's leadership has established a Sustainability Office, led by a newly appointed **Head of Sustainability** and supported by a **Digital Transformation Lead**. Their ambition is for IIT to become recognised as **Sri Lanka's leading sustainable technology campus by 2030**.

The Head of Sustainability has observed that, although students and staff increasingly care about climate change and responsible consumption, the institution currently has little reliable data on its energy, water and waste footprint. IT equipment is replaced regularly, but there is no consistent process for tracking what happens to it at end of life. Many sustainability activities are driven by individual clubs and lecturers and are not coordinated, measured or reported. At the same time, employers, international partners and prospective students are paying closer attention to how institutions perform on sustainability, and international impact rankings are becoming more visible in Sri Lanka's higher education market.

The client believes there is an opportunity to use digital technologies to measure, manage and communicate IIT's sustainability performance, and to engage students and staff in more creative and meaningful ways. The exact form of the digital solution(s) has not yet been defined. It is up to your team to research, analyse, and propose the most viable concept, strategy, and roadmap. Creativity and critical thinking are strongly encouraged, but your recommendations must be grounded in research, analysis, and feasibility.

The Head of Sustainability will lead the programme and stakeholder engagement, while the Digital Transformation Lead will oversee technology development and the technical roadmap. IIT plans to recruit one experienced developer and to involve final-year students in selected development projects.

IIT has ring-fenced a **maximum budget of LKR 80 million for the first three years**. Existing IT infrastructure and campus facilities should be reused wherever possible. The client understands that this budget cannot cover every possible capability, so it plans a **phased approach**, starting with a

minimum viable set of digital tools delivered as quickly as possible. Cost savings (for example, from reduced energy and water use) and any income generated will be reinvested to expand and improve the solution over time.

In the longer term, the client would like IIT's approach and tools to become a recognised model that could be shared with, or offered to, other higher education institutions and corporate partners in Sri Lanka and the wider region.

IIT's Sustainability Goals

IIT has the following goals, aligned with the UN Sustainable Development Goals (SDGs). These are a starting point: your team is expected to evaluate them in light of your research and analysis, and to recommend how they should be refined, prioritised and achieved.

#	Goal	Draft target	SDG link
1	Low-carbon campus operations	50% reduction in Scope 1 and 2 emissions per student by 2028 against a 2025 baseline; net-zero operational carbon at the Ratmalana campus by 2030; at least 40% of electricity from on-site solar.	SDG 7, SDG 13
2	Responsible IT and e-waste	100% of retired IT equipment refurbished, donated or recycled through certified handlers; average lifespan of lab and staff devices extended to five years.	SDG 12
3	Circular, zero-waste campus	75% of campus waste diverted from landfill by 2028; single-use-plastic-free canteens by 2027; a campus reuse scheme for textbooks, electronics and equipment.	SDG 12
4	Water and green spaces	30% reduction in mains water use through rainwater harvesting and monitoring; measurable green-cover targets at the Ratmalana campus.	SDG 6, SDG 15
5	Sustainability in learning and research	Sustainability content embedded in every programme by 2027; an annual green-technology innovation challenge; at least ten industry-partnered sustainability projects per year.	SDG 4, SDG 9
6	Inclusion and digital access	Digital-skills outreach to 5,000 underserved young people by 2030; expanded needs-based scholarships.	SDG 4, SDG 10
7	Transparent governance	An annual sustainability report aligned with GRI standards; participation in an international sustainability ranking (e.g. THE Impact Rankings or UI GreenMetric) by 2028.	SDG 16, SDG 17

IIT has already introduced a number of sustainability initiatives, such as smart meters and recycling facilities. However, the data these produce is not consolidated, monitored or reported, and other activities are run independently by clubs, staff and programmes. As a result, IIT has no established

sustainability baseline, and no measured performance data is available to you. The information in this brief is indicative background only.

Your team is therefore expected to investigate the current situation for yourselves, for example, through observation of the campus, publicly available information about IIT, and comparison with similar institutions, alongside your research into the external environment. Where firm data is unavailable, state the assumptions you have made and explain why they are reasonable. The evidence you gather in this way, and the assumptions you declare, form the basis of your analysis, your chosen priorities and your recommendations.

4. Strategic Review Meetings

During the module, your group will have **three Strategic Review Meetings** with your Lead Consultant (module tutors) during seminars. These meetings provide opportunities to present your developing work, test your thinking, receive formative feedback and discuss your progress. They are supportive checkpoints, not formal assessments.

The meetings will also provide opportunities to discuss your use of GenAI and ensure that your approach is responsible and consistent with university guidance.

Meeting schedule:

- **Weeks 3–4:** Present your work plan and receive feedback.
- **Week 5:** Present your strategic analysis, key findings and emerging recommendations.
- **Week 7:** Present your final recommendations and supporting digital strategy.

Attendance and active participation in the Strategic Review Meetings are important to your success. All teams and students are expected to attend. Students who miss two or more meetings, or whose individual contribution cannot be established, may be invited to a meeting with the module Tutor to validate their contribution and the authenticity of their work.

Your also expected to act on the feedback asap and use it critically to improve your work. Therefore, following each meeting, the team must agree an action plan and upload it to the Blackboard group discussion area within five days of the meeting.

Your responses to the feedback received during all three meetings must later be documented in Appendix B: Feedback Action Log.

5. Submission

Your group must submit a single report of no more than 3250 words to Blackboard detailing your research, analysis, recommendations and supporting digital strategy.

The report should bring together the key findings from your work, including your understanding of IIT's current situation, relevant sector research, your recommended business initiatives and the digital strategy that will support them.

The report should be written as a professional consulting report prepared for the client. It should strike an appropriate balance between description, analysis and conclusions.

Visual tools and diagrams are highly encouraged to help communicate your analysis and recommendations more effectively. However, visuals alone are not sufficient. They must be supported by explanation and discussion appropriately. Also, you must not circumvent the word limit by converting written content into images.

The next section provides guidance on the **content** for the report. As indicated, this is only guidance. You are responsible for deciding the exact content and structure of your report.

6. Report Content

Introduction (5%)

Set the scene here, for example, by explaining the purpose and scope of the report, the importance of sustainability in the Higher Education sector, and the specific IIT context that your report addresses, etc.

Strategy Development Approach (5%)

Explain, where appropriate with visual aids, the overall approach your team followed to develop the strategic recommendations and supporting digital strategy.

Strategic Analysis

1. Analyse the internal and external environment to identify the key factors and strategic insights relevant to IIT. Use the key information available to you (see Section 3) to develop an informed understanding of the IIT's current position, the Higher Education sector and the wider sustainability context.
2. To keep the analysis focused, **select one appropriate strategic framework for analysing the internal environment and one appropriate strategic framework for analysing the external environment**. You may choose frameworks introduced in the module or other appropriate framework of your choice. Justify why each selected framework is appropriate in this project.
3. At the end of this section, include exactly one **GenAI Use Evaluation Box** (maximum 250 words) to explain how individual members or your team used GenAI to support, test, challenge and refine your strategic analysis.

   Please refer to the GenAI Use Evaluation Boxes in section 7 for more information.

   If you used GenAI in this section, the box must be completed. If it is missing, no marks will be awarded for the Strategic Analysis section.

Business Recommendations

1. Develop a **strategic programme,** containing a set of initiatives aimed at advancing sustainability at IIT over the next five years.

   Your team should first identify a **wider set of credible initiatives**. You should then establish appropriate criteria to evaluate these initiatives and select those that should form your final strategic programme.

   Your final strategic programme should:

   - contain a focused set of strategic initiatives that collectively address the most significant or relevant priorities;
   - be highly dependent on, enabled by or driven by digital technology;
   - justify why each selected initiative is appropriate for IIT;
   - explain the dependencies or synergies between initiatives where relevant; and
   - identify significant alternatives that were not selected and briefly explain why.

   You are not expected to describe every alternative considered, but you should provide sufficient evidence to show why the selected priorities represent strong strategic choices for

IIT. Your strategic choices should consider relevant trade-offs between objectives such as sustainability impact, cost, student experience, accessibility, privacy, security and operational feasibility.

2. Identify the **highest priority initiative from the programme**. This should be considered as **the minimum viable product (MVP)** for your proposed strategic programme. The MVP should represent a realistic first implementation that can provide immediate value.
    - Demonstrate the value proposition of the MVP. You should use an appropriate framework to analyse stakeholder needs, problems and desired outcomes.
    - Produce a **Business Process Map** for the MVP, showing its key operational steps or system-user interactions. the process map should identify, where relevant: key actors or users, major activities; important decisions points; information/data exchanges; and system interactions.
3. At the end of this section, include exactly **one AI Interaction Evaluation Box** (maximum 250 words) to explain how individual members or your team used GenAI to support, test, challenge and refine your strategic choices and proposed initiatives.

    Please refer to the GenAI Use Evaluation Boxes in section 7 for more information.

    If you used GenAI in this section, the box must be completed. If it is missing, no marks will be awarded for the Strategic Analysis section.

Digital Strategy

Develop a digital strategy that identifies the digital and IT capabilities required to enable your proposed programme initiatives in the previous section. The strategy should show how your technology choices align with and support the business initiatives.

It should include:

1. **Proposed Application Portfolio and Architecture** – Identify the essential business applications, their high-level capabilities, data requirements and other supporting technology components.

    Clearly explain or illustrate, where applicable with visual aids, how the application portfolio aligns with the four business initiatives.

    The recommended application portfolio should consider relevant constraints where appropriate (e.g. organisational, technical, security, ethical, operational, etc.). The technology choices should be derived from the capabilities required to deliver the recommended business initiatives, rather than selected simply because they are emerging or innovative. Where appropriate, identify one technology that might appear attractive but which you decided **not** to adopt, and explain why.

2. **Implementation Plan** – Propose a realistic and actionable implementation roadmap for the strategic programme of initiatives, showing the priorities and timing for implementing the proposed initiatives.

    You should also discuss how the initiatives would be evaluated, including the significant assumptions, risks, and conditions that could affect their successful implementation.

3. At the end of this section, include exactly **one AI Interaction Evaluation Box** (maximum 250 words) to explain how you used it to test, challenge, validate and refine key elements of your digital strategy.

    Please refer to the GenAI Use Evaluation Boxes in section 7 for more information.

    If you used GenAI in this section, the box must be completed. If it is missing, no marks will be awarded for the Strategic Analysis section.

Project Review for Professional Learning (10%)

As a team, hold a separate meeting specifically to review your teamwork and prepare this section. Treat the meeting as a "professional" post-project review rather than a discussion of routine project-management issues.

Your review should:

- identify **two aspects** of the project or team process that worked well and explain how they supported the quality of the final strategy;
- Identify **two significant weaknesses** that could have been handled more effectively. Explain how the team actually did, which alternative approach(es) could have been better, and what the team learned from these issues that could inform future projects;
- include a table (like below) summarising each member's comments on at least one **key** skill, capability or area of professional understanding they developed.

Team member	**Skill, capability or area developed**	**How developed? (brief example from the project)**	**How it may be applied or help in future**
Member 1			
Member 2			
Member 3			
Member 4			

Examples used in this section should be specific and briefly identify the specific activity, decision, incident, etc. that demonstrates the strengths, weaknesses or stated learning. The purpose is to explain how the learning occurred, not to provide additional documentation.

Report Presentation (5%)

Ensure that the report is professional and well structured. It should be clear, concise and professionally presented with appropriate headings, page numbers, a table of contents, appendices, figures with captions, citations, references and other standard report elements.

At the beginning of the report, include a table confirming the names of all authors and their contributions to each section.

Appendices

The following three appendices below are compulsory and must be included in the group submission. They provide evidence of the team's planning, engagement with feedback and individual contribution, and the authenticity of the submitted work.

The appendices are not awarded separate marks HOWEVER; they may be used to validate the authenticity of the submitted work and validate individual contributions from the team members. Therefore, missing, incomplete or inconsistent evidence may therefore affect marks. The team or an individual member may also be required to attend a meeting to discuss the work, contribution and authorship.

1. **Appendix A: Group Work Plan – Mandatory**

   The plan should be maintained throughout the project and provide a clear record of planned and completed work. For example: Key tasks and deadlines; Roles each member took in each

key task (i.e. strategic analysis, business recommendations and digital strategy); meetings planned, meetings tool place, who attendees, purpose, and outcomes/actions.

2. **Appendix B: Feedback Action Log – Mandatory**

   A document or a table summarising how your team responded to feedback received during the three strategic review meetings with the Lead Consultant. For example, for each meeting, you can summarise the main feedback received; the action agreed by the team; who were responsible for taking the action forward; and what the team subsequently changed, etc.

3. **Appendix C: Individual Contribution Statements – Mandatory**

   Each team member must provide a brief statement or summary confirming and explaining the work they undertook for each key task or section of the project.

   The members' individual contributions must be evident from the logs in the group discussion area on Blackboard, e.g. through discussions, work shared, review done, feedback responses and other documented contributions. Students should therefore use the discussion area throughout the project to record and demonstrate their involvement.

You may include further sections in appendices to provide other relevant supporting information e.g. meeting logs. However, only include material that adds value or helps substantiate the report. All appendices should be clearly labelled and referred to in the main body where relevant.

7. Generative AI Tools

Use of GenAI Tools

GenAI is permitted but not required for this coursework. GenAI may be used to support your learning, research and working process. What matters is that any use is appropriate, critical and **responsible**.

Appropriate uses of GenAI:

1. Research and exploration: identifying relevant topics, perspectives, questions or possible sources for further investigation.
2. Understanding and analysing: explaining concepts, technologies or complex information, and challenging or testing your analysis and assumptions.
3. Exploring alternatives: generating possible ideas, approaches or questions that you can investigate and evaluate.
4. Reviewing your work: improving the clarity, structure or style of your own work.
5. Creating supporting materials: helping to produce visual tools where appropriate.

GenAI should support your thinking and working process, but must not replace your own analysis, judgement, decision-making or research/investigation using relevant evidence, including literature, credible online sources, client meetings and similar.

You must not submit substantive AI-generated content as your own work as this may constitute plagiarism and be referred to the University's quality and standard team for investigation.

GenAI output is not evidence in itself. It may be inaccurate, incomplete, generic or based on inappropriate assumptions. You must therefore do independent research, check and validate it against appropriate evidence.

Where AI-generated suggestions are used, consider questions such as:

- What assumptions does the output make?
- Is the suggestion relevant to Client?

- What evidence exists to support it?
- What alternatives exist?

Your team remains responsible for the accuracy, quality and originality of the submitted work, including all strategic decisions and recommendations. You should be able to explain how AI-generated suggestions or information were tested, validated, accepted, rejected or modified before being incorporated into the final strategy.

GenAI Use Evaluation Boxes

If members or your team use GenAI in *Strategic Analysis, Business Recommendations* or *Digital Strategy*, you must include exactly **one GenAI Use Evaluation Box**, similar to this, at the of the relevant sections. Each box should be a maximum of 250 words.

The box should explain how individual members or team used GenAI to support, test or challenge the work in that section, and how the resulting ideas or information were considered by the team.

For each relevant section, provide **two specific examples** showing how GenAI output was:

- tested or validated;
- accepted, rejected or modified using your own judgement; and
- checked against relevant evidence and Westminster's context.

The examples should show how individual or team exploration contributed to team discussion and final decisions.

The purpose of the GenAI Use Evaluation Box is to provide evidence of critical and responsible use of GenAI. It is not separately marked, and the sophistication or quantity of prompting is not assessed.

If your team used GenAI in a section but does not include the required GenAI Use Evaluation Box, no marks will be awarded for that section.

8. Other Important Rules and Guidance

Teamwork and Contribution

All members must contribute meaningfully to **every task**. A **divide-and-conquer approach**, where members work independently on major sections with little collaboration, is not permitted.

As a team, you may work in-person, remotely, or through a combination of both.

As soon as possible, the team should:

- create a group work plan;
- appoint a team leader to coordinate the project and monitor progress;
- agree how roles, responsibilities, meetings, deadlines, mode of communication etc.

The work plan may be created using a table or collaboration/management tool of the team's choice. It should reflect the requirement for all members to contribute to the development of the key tasks and sections of the report.

The team must work collaboratively on each key task which are Strategic Analysis, Business Recommendations and Digital Strategy listed under the report content section.

Contributions may include research, analysis, idea development, review, discussion and decision-making. Major decisions and final outputs should always be discussed and agreed collectively.

A group discussion area on Blackboard will be created for each team. Each member must regularly upload evidence of their individual contribution and collaboration as the coursework progresses. This may include research and analysis, draft material, feedback on other members' work, proposed plans or ideas, and records of key discussions and decisions.

This evidence will not receive separate marks. However, it may be used to assess whether contributions were broadly equitable and whether individual marks are appropriate.

Where a student's contribution is not evident from the group discussion area, their mark may be reduced or they may receive zero for relevant assessment criteria. The team or individual may also be required to attend a meeting with the module tutor to establish their contribution and verify the authenticity of the submitted work.

Academic Integrity and Referencing

All submitted work must be your own. You may discuss ideas with other students, but sharing answers, solutions or written work with other students or groups is not permitted.

All sources, ideas and concepts used in your work must be appropriately cited and referenced. You may use **Harvard or Vancouver referencing**. Guidance is available through the University's library and the *Cite Them Right* online guide.

6. Marking Scheme

The following tables outline the areas to be marked and their weighting

Assessment criterion	What is assessed	Weight
1. Introduction	Purpose, scope, context and focus of the report.	5%
2. Strategy Development Approach	Explanation and justification of the overall approach used.	5%
3. Strategic Analysis	Internal environment analysis (10%); External environment analysis (10%). Thisen and ranuli	20%
4. Business Recommendations	Strategic programme proposed and choices (15%); MVP value proposition (5%); Initial List done by Diddy and manthi MVP business process map (5%).	25%
5. Digital Strategy	Digital systems, data, technology and related needs (15%); Level of alignment (5%) Done after part 4 Implementation plan, evaluation, assumptions and risks (10%).	30%
6. Team Reflection	Evidence-based reflection of team's strengths, weaknesses and learning from it;	10%
7. Report Presentation	Structure, formatting, clarity, visual communication, referencing and report conventions.	5%
Total		**100%**

10. Assessment Rubric

Criteria	Excellent (80-100%)	Good (60-79%)	Satisfactory (40-59%)	Needs Improvement (20-39%)	Unacceptable (0-19%)	Weight
Introduction to the report & business	Clear, concise, highly engaging introduction explaining the purpose, context, scope, and provides an insightful overview of the sustainability or sector.	Adequate introduction that covers the purpose and business overview well, though minor gaps/omissions exist.	Basic introduction covering purpose, scope and context partly. limited depth or connection to the report.	Incomplete or unclear introduction. Minimal effort to describe the purpose, scope and context.	Missing or extremely vague introduction with little relevance to the task.	5%
Approach	Thorough, logical, well explained and justified with clear steps and connections;	Clear and appropriate approach with adequate justification. Minor omission or gaps are present.	Approach described but lacks clarity, detail, justification or connection between steps.	Unclear, poorly structured or weakly justified.	No meaningful explanation.	5%
Internal environment analysis (10%)	Comprehensive analysis using an appropriate framework. Strong, research-backed insights into internal factors and constraints impacting the business. Excellent justification for framework selection.	Solid analysis using an appropriate framework. Covers most internal factors well but some factors are left out or not fully clear. Generally good research. Justification is adequate.	Basic analysis. Limited exploration of internal environment. Lacks depth or may be partial, missing some key elements. Limited research effort or research is not evident.	Weak or poorly structured analysis. The chosen framework is poorly applied. Minimal research or critical thinking evident.	Internal-environment analysis is missing or extremely limited.	10%
External environment analysis (10%)	Comprehensive and clear analysis using an appropriate framework. Strong research providing deep insights into sector, competition and other external factors. Excellent justification for framework selection.	Solid analysis using an appropriate framework. Covers the external environment well but some factors or dynamics are left out or not fully clear. Generally good research. Justification is adequate.	Basic analysis. Limited exploration of external environment or factors. Lacks depth or may be partial, missing some key elements. Limited research effort or research is not evident.	Weak or poorly structured analysis. The chosen framework is poorly applied. Minimal research or critical thinking evident.	External-environment analysis is missing or extremely limited.	10%

Business recommendations – strategic programme	Recommendations are clear, concise, logical, feasible and cohesive as a set. Clearly aligned with the findings of strategic analysis, demonstrating creativity and innovation approaches to achieving success.	Most recommendations are sensible, feasible and coherent. Some improvements are possible in clarity, depth, logic or alignment with the strategic analysis.	Recommendations are partially sensible or feasible. They may lack clarity, coherence, realism or connection to the strategic analysis.	Recommendations are generally weak, unclear and not connecting well with the challenge. Poor alignment with strategic analysis, or not well-defined or practical.	No proposals or recommendations provided, or recommendations are irrelevant and mostly irrelevant or unsupported by strategic analysis.	15%
MVP value proposition	Thorough and well-thought, excellent stakeholder analysis, uses an appropriate framework; clearly demonstrates the MVP's realistic value.	Clear and sensible; with good stakeholder analysis using an appropriate framework. Some minor gaps in the analysis or MVP's value.	Partial, basic or underdeveloped overall. Basic stakeholder analysis with issues in depth, completeness or clarity.	Limited or unclear stakeholder analysis; weak framework application and/or poorly justified value proposition.	Little or no stakeholder analysis; value proposition largely unclear or unsupported.	5%
Proposed business map	Highly detailed, clear and accurate map, covering all relevant actors, systems, activities or steps, decisions and interactions.	Logical and understandable map identifying most key process elements, with minor omissions. Good understanding and use of an appropriate diagramming technique.	Basic or simplistic map showing the main process stages, but with limited detail or some inaccuracies. Diagramming technique may not be fully understood.	Incomplete or unclear map with several missing process elements, illogical flow or inconsistent conventions.	Missing, substantially incomplete or inaccurate map with little evidence of appropriate mapping.	5%
Digital Strategy - application portfolio and architecture	Comprehensive, clear and well-structured portfolio. All elements in the portfolio highly relevant, realistic and aligned to all proposed initiatives and constraints.	Clear portfolio with most elements in the portfolio relevant, realistic and aligned to proposed initiatives.	Partial portfolio covering only some initiatives, missing some key technology elements, or including some irrelevant or unrealistic ones.	Very limited, unclear or poorly developed portfolio which only covers a small part of initiatives. Or largely, lacking relevance or realism.	No attempt or proposed applications or tech elements are completely irrelevant or disconnected.	15%

Implementation plan	Well-structured, concise, and feasible implementation plan. Priorities, sequence and timing are clear and strongly justified based on needs and priorities.	Sensible implementation plan with a logical timeline. There are minor issues in terms of priorities, sequence and timing or clarity.	Basic implementation plan with some logical steps but some unclear/illogical parts in prioritisation, timeline or justification.	Weak or poorly structured implementation plan. Lacks a coherent timeline and unclear order of steps. Minimal justification.	Implementation plan is missing or entirely impractical. No timeline or order provided.	10%
Project Review for Professional Learning	Specific and insightful reflection demonstrating excellent collaboration and planning. Excellent reflection on challenges, responses and learning.	Good reflection with well-chosen examples of collaboration, challenges and learning.	Mostly descriptive with generic examples and/or limited reflection, evidence or depth.	Vague reflection with little evidence.	Little or no meaningful reflection.	10%
Report presentation	Exceptionally well-organised and professional. Excellent formatting and use of bullets, visuals, appendices, references, etc. Free from errors and easy to follow.	Well-organised, professional with clear structure. Good use of headings, visuals, and referencing, etc. with only minor issues.	Report structure is adequate but lack professional polish, formatting, visuals or key elements.	Report is poorly structured, presented and difficult to follow. Misses key elements e.g. headings, ToC, page numbers, references, etc.	No discernible structure. The report is chaotic or incomplete, with missing sections, references.	5%
					Total	**100%**

Table 1. Assessment rubric for marking
